Memory Problems: What is Normal Aging and What is Not?

When older people start to have these types of symptoms, they often worry about Alzheimer disease. It should never be assumed that an older patient with memory loss has Alzheimer disease or another neurodegenerative dementia without first considering reversible causes of dementia.

The Non

The two most common forms of dementia are multi-infarct dementia sometimes called vascular dementia and Alzheimer's disease pronounced ALTZ-hi-merz.

Do Memory Problems Always Mean Alzheimer's Disease?

For specific information concerning your personal medical condition, JAMA suggests that you consult your physician. Older adults are particularly susceptible to dehydration.

Forgetfulness in Old Age

Some doctors believe it is very important for people suffering multi-infarct dementia to try to prevent further damage by controlling high blood pressure, monitoring and treating high blood cholesterol, and not smoking. Find helpful ways to reduce stress like exercise or meditation, and if it is too much to handle on your own, consult with a therapist. As long as it performs well enough to do its job, you may have to move over to the slow lane.
