## WADE : World Alliance for Decentralized Energy

When World War II erupted in Europe in September 1939, members of the emergent foreign policy establishment—a loose agglomeration of East Coast lawyers, businessmen, and bureaucrats—recognized that the United States would come out of the war more powerful than ever before. Democratic disillusionment is chiefly a western phenomenon, most acute in developed, English-speaking countries.

### ‘Decisions we make today will shape tomorrow’s world’

There was simply no alternative to armed primacy. Analysis based on data produced by Campbell indicates that the peak of non-Middle East production will occur before 2010.

### The future of energy: Taking on tomorrow

Innovative approaches also include the use of digital tools to shift electricity demand to cheaper and less emissions-intensive hours of the day, reducing electricity bills for consumers and helping with system balancing, while also helping to reduce emissions. However fast overall energy demand grows, electricity grows faster. The expansion of generation from wind and solar PV helps renewables overtake coal in the power generation mix in the mid-2020s.

### Today Hong Kong, tomorrow the world?

The question of siting a wind energy conversion system, or systems WECS , represents a balance between economic and technical criteria and the environmental and social values of the user and the local citizens, whether the WECS is for a small farm or a utility serving a multi-state region. Estimated investment in efficiency and end-use applications is set to fall by an estimated 10-15% as vehicle sales and construction activity weaken and spending on more efficient appliances and equipment is dialled back.

### World’s First Hydrogen

The pursuit of all economically viable opportunities for efficiency improvement can reduce global energy intensity by more than 3% each year.
