Atlas of Cyberspace

Here for the first time is an examination and selection of their maps, gathered together into one comprehensive source: the *Atlas of Cyberspace*.

In recent years they have turned their attention to a new realm, cyberspace. There are technical maps of infrastructure and traffic: domain names mapped onto physical maps, ISP marketing maps, 3D Internet topologies. Martin Dodge and Rob Kitchin have discovered a remarkably wide range of approaches to visualizing the Internet.

I feel that this book is quite simple and colourful, mostly are graphics with some paragraphs next to it. Several of the most intriguing hand-drawn and computer-generated images are simply illegible; all of them have lost their textural presence and contrast.

The text, on the other hand, ranges from workmanlike commentary on the graphics to watered down post modern cultural analysis.

Written in accessible style and illustrated with over 300 full colour images, the *Atlas of Cyberspace* catalogues thirty year's worth of maps to reveal the rich and varied landscapes of cyberspace -- a world occupied by half a billion users. He is researching the geography of Cyberspace.

We would also like to thank the team at Pearson Michael Strang, Sally Carter and Katherin Ekstrom for their enthusiastic support of this project. For anyone with an interest in the structure, content and social dimension of the online world, this is a fascinating and invaluable resource. The first quarter of the book traces the history of the development of the web, and attempts to map traffic patterns and growth.
