Laser Eye Surgery: Guide/ FAQ

Clinical studies may also follow people over time. Patients read an eye chart which helps show how well they see with and without glasses. The lens uses an embedded gauge to measure changes in the cornea's shape.

Beyond glasses! (1997 edition)

You should undergo an eye exam with dilation every two to four years from age 40 to 54, and every one to three years

from age 55 to 64. This amount covers the surgery and the follow-up visits at the Eye Institute for one year.

Laser Eye Surgery: Guide/ FAQ

For PRK, the physician sees the patient the next morning and then every 1-2 days following laser eye surgery until the surface layer of the cornea is fully healed. This medicine, ketotifen, is continually released from the lenses.

Laser Eye Surgery: Guide/ FAQ

Food and Drug Administration, which regulates devices used in laser vision surgery, has taken a hard look at Lasik, spurred by complaints of troubling side effects and a lack of reliable data about how often they occur. While many of them require glasses to help see up close, 14 percent still need to wear glasses all of the time or almost always.

Best Eye Protection

As with all surgical techniques, laser vision correction is an ever-changing field. She then decided to go through with it.

Guide to laser eye surgery

This is welcome news for patients who use highly multiple times a day. Intraocular contact lens IOL or phakic implant The intraocular contact lens is inserted behind your cornea and in front of your pupil, with your natural lens left in place.
