Protecting India's Coastline

Therefore effective and innovative methods are required other than protection and legislative measures to conserve this precious marine rainforest. A thorough understanding of both the physical and the human sciences is important to the study of the spatial patterns and processes observed in terrestrial, coastal and marine systems set in the context of past, present and future social and economic developments.

Fiji contains a diverse range of coastal ecosystems with varying habitats, geographic environments and intensity of land use that provide an ideal suite of learning environments for biodiversity conservation, forest carbon stock protection and enhancement and integrated natural resources management.

Coastal & Shoreline: Atlantic Coast

These programs need to be aware of changes affecting the coastal areas and know how to act in response. Much emphasis is laid on protecting the natural environment of the coast, working with natural features and involving stakeholders. The frequency analysis methodology used here can be replicated to update the Key Principles of EBM in the future.

Strategies have, inter alia, been developed for cooperation between harbors in the area, for the coordinated spatial planning of wind parks, and for

cooperation in the prevention and combating of shipping casualties.

Coastal Ecosystem Response to Sea

Development within the coastal zone may not commence until a coastal development permit has been issued by either the Commission or a local government that has a Commission-certified local coastal program LCP. MPs in the CEM program can be either a 3 semester individual or team or 2 semester team-based project, though the large majority of students choose the 3S option. The advantage of a sustainable development perspective is that it provides a broader set of objectives and can start with whichever are most materially relevant to society.

Department of Natural Resources

Such an integrated long-term vision is a prerequisite for ICZM because most developments in the coastal zone have planning dimensions of 10 years or more.

As noted earlier, a category such as fishing would have to be subdivided in a variety of ways, taking into account descriptors such as the scale of fishing, the gear used, and the time of the year. Coastal erosion is a severe problem in Sri Lanka that results in damage to or loss of houses, hotels and other coastal structures, undermines roads, contributes to the loss or degradation of valuable land and disrupts fishing, navigation, recreation and other activities. This list is only provided to give examples of some popular current concentrations.
