A combustion zone may also be characterised in terms of velocity, length and time scales. Texturation des oxydes lamellaires par frittage flash: étude des propriétés anisotropes.

**Browse by Document Types**

The key issue is to choose suitable heat transfer coefficients for impingement cooling zones based on not only experimental results but also industrial runout table data from Company S.

## **content**

In spite of decelerating flame velocity, the speed of pressure built up is rising owing to the increasing with radius flame front area and, thus, mass burning rate.

### **Micro/nano scale phenomena and thermal properties. Keynote addresses**

Garcia, Pablo and Blanco, Cristian and Navarro-Rodríguez, Ángel and Sumner, M.
