Is The US Coal Industry Completely Burned Out?

According to from the US Energy Information Administration EIA , US coal production fell by 168 million short tons MMst 24 percent in 2020 to total 537 MMst for the year. These initiatives have met mixed success.

view

Coal has been a lynchpin of the global energy system since the industrial revolution. However, they would necessitate very stringent and rapid mitigation measures post-2030 if the 2°C target is to be met.

The future of US coal power will be one of small, technology

Coal Outlook 2021: Expected Rebound in Demand to Be Short

The late Hunter Harrison was bearish on coal, explaining in the summer of 2017 that CSX would buy no new locomotives to haul coal trains out of Appalachia. In July 2019, on the second day of the Blackjewel train blockade, Shoupe stood in solidarity with the protesting miners.
