Differential Equations and Dynamical Systems

Generic indicators for loss of resilience before a tipping point leading to population collapse.

Introduction to Differential Equations with Dynamical Systems

Similarly, one is interested in periodic points, states of the system that repeat after several timesteps. As we have discussed before, the units of the left hand side need to be the same as the units of the right hand side.

Maybe we should have kept the original dimensions? Ultimately, this is because the of the solar system is too complicated to be captured by such simple, well-behaved objects as power series.

The discipline shares connections to and applications with both the static world of problems and the dynamical world of. Even simple often exhibit seemingly random behavior that has been called chaos.
