Bedwetting: Causes & Treatment

If your child is aged 6 or older and is having problems with staying dry, you are advised to speak to a professional. American Family Physician 2003 ; April 1; 67 7 : 1499 — 1506 Ramakrishnan K. There is insufficient evidence about the good versus harm that behavioural therapies may exert in this regard.

Enuresis

Proceedings of an International Symposium. Consider diabetes or kidney disease Does the child snore or have daytime somnolence? Sleep problems may sometimes persist after the child has outgrown colic because the strategies that parents developed to decrease the crying spells i.

Bedwetting: Causes & Treatment

Therefore, the bladder will just release urine when it feels full. Treating the constipation is often the first step to treating the bedwetting in these cases. In a systematic overview from the Cochrane collaborative , adverse outcomes of simple behavioural strategies for enuresis when reported leading to a high dropout rate were family strife, emotional problems, and failure of the treatment because it was too demanding of the children or their families.

Bedwetting in Children & Teens: Nocturnal Enuresis

Bed wetting does tend to run in families, many children who wet the bed are highly likely to have either one or both of their parents who did too.

Management and treatment of nocturnal enuresis—an updated standardization document from the International Children's Continence Society

On the other hand, a child who falls asleep accompanied by some parental behavior, such as rocking or being physically present, may sometimes have difficulty going back to sleep when he or she wakes up alone in the middle of the night. It may be associated with deep sleep patterns.
