## Structure of the Rainforest

Since 1947, the total area of tropical rainforests has probably been reduced by more than half, to about 6. Rainforests thrive on every except Antarctica.

## Structure of the Rainforest

Canopy layer The canopy at the showing The canopy layer contains the majority of the largest trees, typically 30 metres 98 ft to 45 metres 148 ft tall. Because of the small amount of sunlight and rainfall these plants receive, they adapt easily to home environments. Using the fossilized remains of plants, a team of researchers studied the past of the rainforest and how the asteroid gave rise to the rainforests of today.
