

# Capacity measurement & improvement - a managers guide to evaluating and optimizing capacity productivity

## Irwin Professional Pub. - Capacity Management Definition

PROBLEM	NOW IT LOOKS	WHAT TO DO
Distacting thoughts	While attempting to focus on a single problem, you experience intruding thoughts about everything from the emails in your inbox to what you'll eat for dinner.  Example: "When I get back to my inbox, I'll answer Jerry's email first."	Practice bringing your focus back by telling yourself you'll address your other thoughts later and repeatedly bring your attention back to the problem you're working through.
Mental looping	While working through a problem, you come back to it over and over again without new breakthroughs.  Example: "The introduction of my blog post will start with an anecdote about Jim. Not sure how I'll proceed to my next section... Jim's story will make a good opener though."	Recognize your looping thought pattern and direct your focus to the next steps. Don't allow yourself to dwell on what you know.

## Introduction to Measurement

Here Ariel the Dog is waiting patiently inside. This article does not any.

## Measuring: Capacity

Unfortunately, sometimes it cannot be avoided e. Capacity is then changed to match demand. Without factoring in overtime, this company could handle a maximum of 400 hours of business each week.

Factors Affecting Capacity Measurement Accuracy In the above example, we were measuring three parameters: current, time, and voltage. Also, notice that this answer is not expressed in cups, as the problem requires. Before calculating the takt times for every single product you make, try to group them into groups with similar work content.

Capacity management is of particular concern to large companies because it's relatively easy to purchase additional hardware for smaller organizations at a low cost; however, when a business grows, adding new software becomes exponentially more expensive.

## **How to Measure Resource Capacity and Demand**

Your capacity will differ if your plant runs on one shift or two shifts per day. All of these activities cause stress to your lungs and should be avoided so as to not affect your test results.
