## Stratigraphic placement of the Santonian

The carbonaceous shaly beds form distinct dark-gray beds in many outcrops. Flat chalky limestone beds, including the Fencepost limestone bed at the top, are scattered through the member and are believed to be time parallel because of consistent relationships to Pfeifer bentonite markers. A sparse fauna of epizoans includes *Pseudoperna bentonensis* and two species of stalked cirripeds.

## Upper Cretaceous subsurface stratigraphy and structure of coastal Georgia and South Carolina

Geological Survey, who also wrote the original version of the Pierre Shale description Cobban, in Hattin, 1965b.

## Summary of Citation

Filesize: 48.1010 MB

It should be noted that in other regions of the Western Interior, west of Kansas, the Pierre Shale and Fox Hills Sandstone and equivalent beds contain evidence of an additional cycle of sedimentation Bearpaw cycle not preserved in Kansas Weimer, 1960.

#### **Revised geochronology, correlation, and dinosaur stratigraphic ranges of the Santonian**

Figure 4--Locality map and east-west cross section of sedimentary facies in upper part of Dakota Formation, Russell County, Kansas. The upper half of the member contains a profusion of inoceramid remains which seemingly reflect optimum conditions for growth of inoceramid bivalves. The Codell consists mostly of well-sorted fine quartzose sand and coarse quartzose silt.
