**Musical Instruments Classification Essay**

All musical instruments can be divided into four major classes: aerophones, chordophones, electrophones and percussions. The biggest and the most versatile class is aerophones which can be further subdivided into free aerophones and pipe aerophones. The next three classes can be divided into those which are struck and those which are bowed. Reed aerophones are represented by single reed (organ pipes) and double reed (human voice) instruments. Free reed instruments in their turn split into those with frame and unframed bassoon. Each of these two groups is further subdivided into those which are woodwind and Unframed reed aerophones can be wind-blown (bagpipes, Aeolian harp), mouth-blown (instrument), or mouth-blown-and-plucked (piano harp) while frames reed instruments are mechanically-blown/bowled organ, orchestra, foot blown (harmonium, mouth organ).

The pipe subclass splits into transverse, reed pipe and edge pipe aerophones. Each of them is further divided into two subclasses: brass aerophones, into those with trumpet, French horn and without (slide/piston, trombone) valves; reed pipe into single reeds (clarinet, saxophone) and double reeds (oboe, bassoon); edge subclass into whistle flutes (whistle pipe, recorder) and woodwind flutes (flute, piccolo). The second largest class is percussions instruments which fall into membranophones and idiophones. Membranophones are subdivided into those with determinate pitch and with indeterminate pitch.

Both of them are then classified by the type of impact: struck (toms drums, snare and bass drums, cymbals, timpani, maces, and other mallets, tambourines, etc.) and plucked (maracas, marimba, xylophone, etc.).
