Proximity to the market, labour, materials and competitors

One reason is simply because they can. Is global sourcing really worth it? Some of these are due to federal regulation; others due to specific standards, such as those for organic foods or specified by retail customers; while others may be policies set by the plant or corporation itself. The Council of the European Union encouraged this in its in 2017.

Testing the production environment for environmental pathogens is, thus, not only a mechanism to verify the effectiveness of sanitation procedures, but is a signal that a corrective action may need to be implemented, or even that a product be pulled should a pathogen be found close to or on product-contact surfaces. For other businesses, being close to their competitors can be important to help them succeed. Thus, it is critical that practices are put in place to minimize their survival.

Why raw materials are a dangerous distraction

This draws a clear line to significant and ongoing supply-side risks. The steel dialogue focusses on the trade aspects of the steel sector, as well as other raw materials. Scrap must for example be free from any contamination, radioactivity or possible hollow or explosive bodies and closed containers.
