Humboldt Marten *Martes caurina humboldtensis* General Information Official Status: Species of Concern, the Humboldt marten does not have any special status under the Endangered Species Act at this time, but is a candidate for listing as endangered by the State of California.

**Microtine rodents lemmings and voles**

The time required for the entire process varied from one day to more than two weeks depending on the size of the specimen and on its condition. These morphological characteristics of the stomach are similar across species of *Microtus*. Miscellaneous The mites *Androlaelaps fahrenholzi*, *Echinonyssus isabelae*, *Euschoengastia zapoteca*, *Eutrombicula alfreddugesi*, *Glycyphagus hypudaei*, *Haemogamasus ambulans*, *Laelaps kochi*, *Laelaps nuttalli*, *Listrophorus pitymys*, *Mycoptes glareoli*, *Neotrombicula claudioi*, *Prolistrophorus sclerobursatus*, and *Pseudoschoengastia pedregalensis* have been found on *Microtus quasiater* ;

Another number will appear in volume 11. Within Fennoscandia such indices for *Clethrionomys glareolus* and *Microtus agrestis* were clearly positively related to latitude and snow cover. Here's a look at 10 extinct animals from the last North American ice age, and what scientists know about their lives.

Bristol Foster, Royal Ontario Museum of Zoology, Toronto, Canada, provided specimens of *Phenacomys intermedius*. Its tail is about as long as the hind foot. The baculum of a specimen from Switzerland is weakly developed, of small size shaft 2.

## **Morphometric Patterns Among Microtine Rodents. I. Sexual Selection Suggested by Relative Scent Gland Development in Representative Voles ( *Microtus* )**

Mention is made if maturity is known or suspected to differ in specimens being compared. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. Cyclic density fluctuations may occur every 2-5 years Krebs and Myers 1974.

### **The Project Gutenberg eBook of The Baculum in Microtine Rodents by Sydney Anderson.**

General Habitat Characteristics: American martens are typically associated with closed-canopy, late-successional, mesic coniferous forests with complex physical structure near the ground.

#### ***Microtus***

Many other protective measures can be taken. The situation in the voles, as we shall see, casts a different light on the matter. S Muskwa ; Clethrionomys gapperi galei, 31 mi.
