## Active Stone Disease in Ruminants

Children who is less than 8 years of age with mild illness should be treated with cotrimoxazole, but therapy should be switched to doxycycline if their course of illness worsens.

## MUST READ: TDB Investigation into what is happening in our water

Ruminants loom large in the last concern, because they, and their excreta, produce large amounts of methane and nitrous oxide emitted to the atmosphere. Foot and mouth disease in South Africa.

## Hypomagnesemia

In positive cases, the fluorescent marker in the Ag: Ab complex emits a green light which is detected under the fluorescent microscope. For example, in the study area, Mpulungu District only had one veterinary camp against 14 agricultural camps for the same territory. CABI Compendium Status as determined by CABI editor.

## Game

This quarantine was only employed in situations where the Veterinary Department had information of illegal movement of livestock.

## Critical Control Points for Lamb Survival

Hajashi, K and Hardie, R. Researchers have found that 85% of colostrum samples will be of high enough quality to provide greater than 100 g of IgG if calves are fed 4 quarts in the first feeding. This is a class effect and hypomagnesaemia will recur if a second PPI is substituted for the first.

## Critical Control Points for Lamb Survival

There is no danger to humans from eating FMD virus-infected or vaccinated meat, other than the poor condition of the carcass due to the disease process ; ;. The attitude of many most? In adults 100 mg of doxycycline in every 12 hours and 200mg of hydroxychloroquine in every 8 hours is indicated for Chronic Q fever.

#### **MUST READ: TDB Investigation into what is happening in our water**

Your doctor will diagnose hypomagnesemia based on a physical exam, symptoms, medical history, and a blood test.

#### **Colostrum Management for Dairy Calves**

Urethral obstruction has been extensively reported in ruminant species Smith, 1989 and is a common problem encountered in male sheep, goat and cattle Van sauna, 2007. This is because magnesium levels are largely controlled by the kidneys. Serology for FMD virus antibodies is by ELISA liquid phase blocking , solid phase competition ELISA and non structural protein NSP antibody ELISA.
