From time to time John Snow Labs can perform updates to our software. This is true also near the Antarctic Circle, but it occurs south of the Antarctic Circle, toward the South Pole. The angle between the moon and a suitable star is measured with a , and after consultation with tables and lengthy calculations gives a value for absolute time.

## GEOGRAPHY 110:

Write out the full version of the following acronyms as used in Geography. There are three hundred and sixty degrees on the circumference of the earth; and these three hundred and sixty degrees, multiplied by four minutes, gives precisely twenty-four hours—that is, the day unconsciously gained. Being 21 hours behind made business difficult because having weekends on backward days meant only four days of the week were shared.
