Some logistical concerns are associated with any curriculum.

Factors and forces influencing on curriculum development

The vertical organization refers to how the elements of the curriculum were sequenced and expanded. The curriculum studio concept in technological education teacher development.

Exploring conceptual and theoretical frameworks for nurse practitioner education: a scoping review protocol

The investigation discussed in this paper reveals that a static list of project manager skills and competencies may not most effectively reflect the skills and competencies that will be most important for them on projects.

Factors influencing on curriculum development

The failure to learn to read undoubtedly puts individuals at risk for poor outcomes in the middle and high school curricula, for which reading proficiency is assumed and required. Both curriculum and instruction in turn are shaped by expectations about the kinds of educational outcomes that students should manifest by the time they graduate from high school. Then, after the curriculum has been implemented and data have been gathered, school personnel may actually see what strengths and weaknesses exist.
