Computational linguistics

For doing this, you will need an understanding where each localization file is stored on the file system. Requests that only unique messages be printed.

Introduction // Purdue Writing Lab

Similarly, a project developed by called was designed to provide answers to naturally written questions about the geological analysis of lunar rocks returned by the Apollo missions. This is true not only of GNU software, but also of a great deal of proprietary and free software. There are usually more interdependencies between words than in English.

Semantics

Any Emacs command able to reposition the cursor may be used to select the current entry in PO mode, including commands which move by characters, lines, paragraphs, screens or pages, and search commands. It has a few special features, among which are the interactive marking of program strings as translatable,

and the validation of PO files with easy repositioning to PO file lines showing errors. There are only a few such possible functions or macros meant for translation, and their names are said to be marking keywords.

Semantics

This chapter explains the format of PO files. The class is located using the CLASSPATH. Therefore xgettext adds a special tag to those messages it thinks might be a format string.

GNU gettext utilities

The main PO commands are those which do not fit into the other categories of subsequent sections. After white space and comments, entries show two strings, namely first the untranslated string as it appears in the original program sources, and then, the translation of this string. With the formation of the ACL and the establishment of independent conference series, the field consolidated during the 1970s and 1980s.

Computational linguistics

This is useful for disambiguating overloaded function calls in C++. This modeling effort achieved, through computational linguistics, what would otherwise have been impossible. Redisplay the current entry po-current-entry.

GNU gettext utilities

This work could lead to further important discoveries regarding the underlying structure of Sindhi, and could have any number of effects on the understanding of Sindhi as a language. This goes beyond the strict technicalities of documenting the GNU gettext proper. Here, additional kinds of flags can be used: range: This flag is followed by a range of non-negative numbers, using the syntax range: minimum-value.

Semantics

Further, the nature and yearly extent of the Daylight Saving correction vary widely between countries. First we have to mark the strings so that the xgettext program see can find them, and second we have to translate the string at runtime before printing them.
